Hi John. I've had more conversations with Elly about the upcoming pre-design sampling. She gave your contact information to LDWG and encouraged them to get in touch with you soon to talk about a right of entry agreement with Container Properties. Elly says a LDWG representative will be contacting you soon to discuss access for the sampling and potentially other pre-design work, such as assessing banks and structures. I told her that it may get tricky because there are Respondents who are not the property owner but are PRPs for the LDW cleanup, and they might want to be involved or at least want to know what's going on with this sampling.

Here is some information to help you and Container Properties understand the sampling locations and analytes:

- The QAPP is being revised based on EPA comments, but attached is a sneak-peek of the draft final map which will be part of the QAPP version LDWG plans to send EPA later this month. The lower half shows bathymetry, past data and remedial areas per the ROD, while the upper part shows the new samples planned. A = archive, sampled for potential analysis depending on initial results. The ring, square, or triangle indicates the sample interval. In some cases, the A is inside a box or triangle, and that means the 0-10 cm interval will be archived.
 - Per Elly – *The sample location maps are subject to change, as EPA will be reviewing the draft final version shortly. Additional changes may arise during field sampling. The preliminary sampling schedule is from May 15 for 7 – 10 weeks.*
- This is the Roundtable's SharePoint link to the draft QAPP which as I said above is being revised:
 - (b) (6)
 - LDWG set up a "guest" login on Sharepoint. The guest username and password are as follows:
Username: (b) (6) ; Password: (b) (6)
- There are tables (also being revised) in Appendix G to the draft QAPP that will provide more detail about which analytes where and why (see Tables G1 and G2).
- You/CP might want to take a look at the Remedial Design Work Plan and Appendix C (which is the Pre-Design Investigation work plan) https://ldwg.org/wp-content/uploads/2020/01/1_Final_RDWP_to_EPA_12-16-2019_main_report_and_figures.pdf
- You can find other docs too on LDWG.org [Find project library, Superfund docs, then Design (AOC4), then Remedial Design Work Plan for LDW Upper Reach.]

Feel free to call if you want to talk through this.

I heard from Elly that LDWG has not yet attempted to contact CP. I have a figure from her that shows sampling locations and depths but she hasn't received permission from LDWG yet for me to forward it to you. I don't know about analytes or methods. I gave a heads up to Jennifer MacDonald who talks regularly with David Blount but she doesn't have many details. If he or CP want to know more they are welcome to contact Elly directly. Janette:

I haven't heard from anyone about this— and thanks for the heads-up. Since CP is one of the few private property owners with actual tide flats one might think the LDWG would ask for permission. I will check with the clients and David Blount and see what they think. I think they would want to know about analytes, sampling methods, sample location, and sample depths.

Hi John,

I've not heard anything about this from you, so I wonder if Container Properties is aware. When we met back in September(?) we talked about how LDWG is planning the upper reach design sampling. Elly Hale (LDW RPM) told me they are close to finalizing the locations and sampling could start in May. She said she would ask the LDWG PM if they have been in touch with Container Properties to get permission to access the property. And she was wondering is there anyone in particular they should talk to? You or someone with CP could also call Elly directly (206-553-1215).

Have you heard anything about LDWG coordinating with CP about this sampling? Do you think there will be any issues around this?

Regards,
Janette
